

MIOF-154CC Series
Media Isolated, Oil Filled, 19mm
mV Output, Temperature Compensated
Constant Current Supply with Gain Set

DESCRIPTION

Advanced Sensor MIOF-154CC Series sensor is a media isolated pressure sensor designed for corrosive gases and liquids compatible with stainless 316L. The sensor design utilizes silicon oil to transfer pressure from the 316L diaphragm to the sensing element. The rugged design is compatible with a wide range of harsh media including refrigerants, compressed air, and hydraulic fluids. The series is powered using a constant current and when configured as in the Application Note, the integrated gain set resistor will ensure sensor field interchangeability to within 1%. The design's superior performance provides low thermal errors across a wide temperature range of 0 to 70°C.

Available in gage and absolutes pressures with a flexible O-ring pressure port these sensors are ideal for OEM customer with ranges up to 500PSI

APPLICATIONS

- Process Controls
- Waste Water Measurements
- Medical equipment/instrumentation
- Pressure Transmitters
- Environmental controls
- Pneumatic controls
-

FEATURES

- Field Interchangeability
- Constant Current
- 19mm O Ring & Flange
- Designed to Replace TE Connectivity/MEAS 154N
- Absolute or Gage pressures
- Temperature Compensated
- 0.2% Pressure Non Linearity (Typical)
- Ribbon & Cable Electrical Connections

Reference Conditions: Isupply: 1.500mA, Ta=25 °C.

- For amplified output circuits, 3.012V ±1% interchangeability with gain set resistor. See application schematic.
- Measured at vacuum for absolute (A), ambient for gage (G).
- Best fit straight line.
- Over the compensated temperature range with respect to 25°C.
- Guarantees output/input ratiometricity.
- Load resistance to reduce measurement errors due to output loading.
- Between case and sensing element.
- The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer.
- Maximum temperature range for product with standard cable and connector is -20°C to +105°C.
- Standard gage units are not recommended for vacuum applications. For vacuum applications below 1/2 atmosphere, consult factory.
- Device Marking: Each part shall be identified with Model Number, Pressure Range, Type, Lot Number, Serial Number and Date Code.
- Shipping/Packaging requirements: The stainless steel diaphragm is protected by a plastic CAP. Each unit will be packaged individually in a plastic vial with anti-static foam.
- Direct mechanical Contact with diaphragm is prohibited. Diaphragm surface must remain free of defects (scratches, punctures, dents, fingerprints, etc) for device to operate properly. Caution is advised when handling parts with exposed diaphragms. Use protective cap whenever devices are not in use

WARRANTY

Pressure sensors have a limited one-year warranty to the original purchaser. AVSensors will repair or replace, at its option, without charge those items it finds defective. This is the buyers sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall AVSensors be liable for consequential, special, or indirect damages. This warranty does not apply to units that have been modified, misused, neglected or installed where the application exceeds published ratings. Specifications may change without notice. The information supplied is believed to be accurate and reliable as of this printing, however, we assume no responsibility for its use.
