Digital Temperature & Pressure Outputs
I²C & SPI Protocols

DESCRIPTION

Advanced Sensors Multi Chip Technology (MCT) SM95D Series incorporates the latest mixed signal ASIC (Application Specific Integrated Circuit) with a RTV bonded silicon gage to provide a leading Digital Output design for medical, life science and pneumatic control industries in a small SOIC-16 package. The MCT-SM95D Series provides a 14bit digital pressure and 11 bit digital temperature output in SPI and I²C protocols. The designs superior performance provides 1% Total Error across a wide temperature range of -10 to 60° C while the ASIC's advanced design sets safety critical operations at the forefront with internal error checking of the sensor's input and output lines. Given these features and an available lower power option; the MCT-SM95D series is the ideal choice for OEM customers.

Reference Conditions: Vsupply: 3.30Vdc or 5.00, Ta=25 °C, Positive Pressure Port A

1. All specification at reference conditions unless otherwise noted.
2. Maximum deviation from a Best Fit Straight Line through Pmin and Pmax measured at 25 °C. Errors included Pressure Non Linearity, Pressure Hysteresis and Repeatability.
3. Maximum deviation from the Ideal Transfer Function expressed as a percentage of the %FSS over the compensated temperature range. Includes calibration errors (Offset & Span), temperature errors (Offset & Span), pressure non-linearity, pressure and thermal hysteresis. TEB Errors for mBar Ranges below
4. The time for the output DAC to be updated with new data.
5. The time for the output DAC to have valid data after a power on reset.
6. Compensated and operating temperature for mBar ranges are 0 °C to 60 °C and -20 °C – to 105 °C, respectively.
7. Maximum pressure the sensor package can withstand without rupture.
8. Maximum pressure without degrading sensor's performance specifications.
9. Maximum pressure the silicon diaphragm can withstand without rupture.
10. Exceeding Absolute Maximum Specification may damage the device. Extended exposure beyond the operating conditions may affect device reliability.
